

Shadow Comparison — Actual vs Theoretical Minimum

Comparison of facility actual energy use vs the Theoretical Minimum calculated by our RL agent. Energy waste represents the gap between reactive control and proactive optimization.

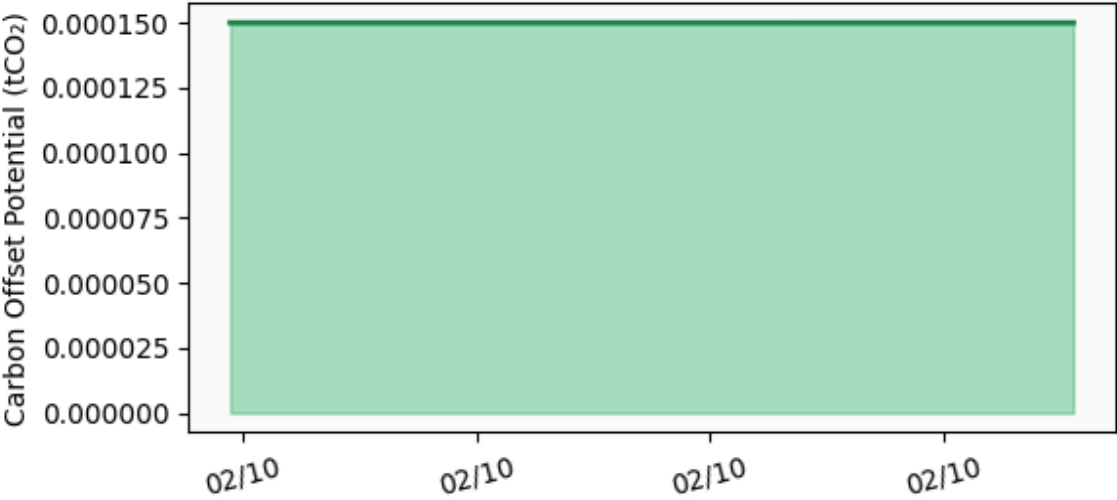

Metric	Value
Total Energy Waste (kWh)	0.4
Carbon Offset Potential (tCO ₂ e)	0.00
Optimization Samples	5
Avg Actual Cooling (kW)	45.0
Avg Theoretical Minimum (kW)	40.5

1. Cumulative Energy Waste (kWh)

2. Carbon Offset Potential (tCO₂e)

Carbon Offset Potential — Avoidable Emissions

Utility Rebate — Demand Management Verification Report

Report Period: 2026-01-12 18:10 UTC to 2026-02-11 18:10 UTC (30 days)
CooledAI — Active Demand Management

1. Baseline vs. Optimized PUE (Monthly Average)

Metric	Value
Baseline PUE (monthly average)	1.3795
Optimized PUE (CooledAI projected, monthly average)	1.2140
PUE Improvement	12.00%

2. Total MWh Saved

Per-cooling-unit breakdown requires unit-level telemetry; this report shows facility aggregate.

Source	MWh Saved	kWh Saved
Facility (aggregate)	0.0000	0.00

3. Estimated Carbon Offset

Metric	Value
Carbon offset (metric tonnes CO ₂)	0.0000 tCO ₂
Carbon offset (kg CO ₂)	0.00 kg
Emission factor used	0.4 kg CO ₂ /kWh

4. Verification Log — Active Demand Management

Timestamped record of optimization events demonstrating active demand management.

Timestamp (UTC)	Cooling Delta	Actual PUE	Proposed PUE	Power (kW)	Description
2026-02-10 23:28:01	-0.100	1.300	1.270	150.0	Cooling adjustment applied
2026-02-10 23:28:01	-0.100	1.300	1.270	150.0	Cooling adjustment applied
2026-02-10 23:28:01	-0.100	1.300	1.270	150.0	Cooling adjustment applied
2026-02-10 23:28:01	-0.100	1.300	1.270	150.0	Cooling adjustment applied
